

Car Rental Fleet Manager - Module 1

Only Module 1 parts: Java basics, class, constructor, variables, objects and simple output.

```
// MODULE 1: Java Foundations
// Car Rental Fleet Manager

import java.util.Scanner;

class Car {
    int id;
    String name;
    double rent;
    boolean available;

    Car(int carId, String carName, double carRent) {
        id = carId;
        name = carName;
        rent = carRent;
        available = true;
    }

    void display() {
        System.out.println(id + " | " + name + " | Rs." + rent);
    }
}

public class CarRental {
    public static void main(String[] args) {

        Scanner sc = new Scanner(System.in);

        Car car1 = new Car(101, "GTR", 5000);
        Car car2 = new Car(102, "Porsche", 4500);
        Car car3 = new Car(103, "Bugatti", 3000);

        System.out.println("CAR RENTAL FLEET MANAGER");

        car1.display();
        car2.display();
        car3.display();

        sc.close();
    }
}
```
